Biology 2012-2013 CATALOG

Courses in Biology can teach you about the processes of reproduction, genetics and evolution that affect us as a species as well as those factors such as diet, environment, fitness and disease that can also affect us as individuals. Wouldn't you like to know why you have brown hair instead of blond? Which food fads are healthy and which diets are for fools? Courses in Biology can often answer those questions and open the door to more. Enjoy the outdoors? We also have a course in conservation that explores the use of natural resources and reviews related agencies and laws. All of these courses are, quite literally, yours for the taking.

WHY CHOOSE A COURSE IN BIOLOGY?

Because...

- You look into microscopes and like what you see.
- You're working toward a career in healthcare.
- You want training that could lead to a job with or without completion of a degree.
- You want credits that may count toward your associate degree.
- You want to earn credits that may transfer toward a four-year degree.

Biology courses are identified by the prefix BIOL.

For More Information

Visit www.schoolcraft.edu where you can view course and program information, schedule a campus tour, apply for admission, register for courses, and request more information. Contact the Admissions and Enrollment Center at 734-462-4426 with additional questions.
