Program Description
The Mammography post-associate certificate is designed for those students that are registered radiologic technologists (ARRT). The program consists of didactic courses and professionally supervised clinical training performed at a local clinical site.

The Mammography program provides the knowledge that will enable students to enter the workforce as entry-level mammography technologists. The program prepares the post-graduate technologist to use mammography to detect for presence of tumor or lump, and other abnormalities of the breast. Mammography uses low-energy radiation to produce images of the breast that play a key role in early detection of breast cancer.

The post-associate’s certificate is awarded upon successful completion of a minimum of 9 credits. Upon completion of the program, students are eligible to take the ARRT post-primary certification examination in mammography. This adds the Mammography credential (M) to their ARRT certification.

Application Requirements

The Mammography Program requires students to complete a specific list of requirements before being officially admitted into the program. Students are listed in a pre-program code while the application requirements are being met. The full program start date and implementation of program code may be dependent on space availability. Requirements are listed in the application (attached to the end of this packet). To be admitted to the program you must complete the following:
